Abstract (en)  
[origin: WO2019126408A1] This invention is a rideshare safety system that utilizes ridesharing passenger and driver mobile devices to record, store, and transmit emergency information, including location data, video from the front and rear cameras, and communications from the rideshare passenger and driver mobile devices to third-party user mobile devices, and stores the emergency information on a central server. The third-party user interface displays the video for monitoring by the third-party user. This invention facilitates the transmission of emergency information from the passenger and driver to third-party users and emergency responders.
