Abstract (en)
[origin: CA3085376A1] A marine vehicle capable of being submerged, comprising a body (11) extending longitudinally along an axis x and a mast (12) extending longitudinally along an axis xm, the mast (12) being provided with a payload (13) intended to be used above the surface of the water, the marine vehicle being capable of being in a panoramic configuration in which the mast (12) extends at least partially above the surface of the water and extends longitudinally in a substantially vertical direction (z), the mast (12) being in an operational configuration in which it protrudes from the body (11) along the axis x, the marine vehicle (10) comprising a propeller (14) capable of generating rotational torque about the axis xm, when the marine vehicle (10) is in the panoramic configuration, so as to rotate the body (11) and the mast (12) about the axis xm.
