Abstract (en)

[origin: WO2019123356A1] The invention relates to a molding device for horizontal tubular bag machines for producing a tube from a material web, comprising a horizontal base (1) which has a slot (3) running in a transport direction and comprising two shoulder parts (6) which are secured to the base (1) on each side of the slot (3) and each of which forms a section of a molding edge, the material web being guided over said molding edge so as to be molded. Each of the shoulder parts (6) comprises at least two releasably interconnected shoulder part segments (7, 7A, 8), the spacing of which can be adjusted by adding one or more extension elements (9). The invention also relates to a horizontal tubular bag machine comprising such a molding device.
