Abstract (en)

[origin: WO2019121487A1] The invention relates to a lift system (1) comprising a lift shaft (2) and a door opening (11, 13), and a transmitter unit (16) for emitting at least one light beam (21) and a receiver unit (18) for receiving the light beam (21), wherein the transmitter unit (16) is arranged on a first side of the door opening (11, 13) and the receiver unit (18) is arranged on the other side of the door opening (11, 13), as well as comprising a test element (30) for testing the receiver unit and/or for testing the transmitter unit (16), wherein the light beam (21) between the transmitter unit and the receiver unit (16, 18) can be interrupted by the test element (30). The invention also relates to a method for testing a receiver unit (18) or a transmitter unit (16) of this type.
