Abstract (en)
[origin: WO2019122069A1] The invention relates to a lift system (1), comprising - at least one first guide rail (10), which is aligned in a first, particularly vertical, direction (z1), - at least one second guide rail (20), which is aligned in a second, particularly horizontal, direction (y2), - at least one third guide rail (30), which is aligned in a third, particularly vertical, direction (z3), - at least one fourth guide rail (40), which is aligned in a fourth, particularly horizontal, direction (x4), - at least one lift cabin (2), which can be displaced along the guide rails (10, 20, 30, 40), - and a plurality of transposer units (11, 22, 33), wherein the lift system (1) is configured such that the lift cabin (2) can be displaced by means of the transposer units (11, 22, 33) between the four guide rails (10, 20, 30, 40), the first direction (z1) and the second direction (y1) define a first plane (yz), the third direction (z3) and the fourth direction (x4) define a second plane (xz), and the first plane (yz) and the second plane (xz) are aligned at an angle to one another.
