Abstract (en)

[origin: WO2019121249A1] The invention relates to fiber-reinforced composite materials made of a fiber material and of a matrix material based on aromatic polycarbonate, and to multilayer composite materials containing one or more layers of a fiber-reinforced composite material of this type. The fiber-reinforced composite material has an appealing appearance with stripes that appear to be naturally formed, on a white or colored base. The fiber layer(s) is/are embedded in the matrix material. The invention further relates to a method for producing the fiber-reinforced composite materials and multilayer composite materials and components, housing parts or housings, in particular for laptop, notebook or ultrabook covers, comprising composite materials of this type.
