Abstract (en)

[origin: WO2019120818A1] A method for producing an adhesive-bonding surface is proposed. The method comprises providing an adherend having at least one surface which is defined as a surface to be adhesively bonded; or providing a transfer adhesive carrier having at least one, preferably planar, surface as a carrier for an adhesive to be applied, and also applying an adhesive to the at least one surface of the adherend or the transfer adhesive carrier by means of a 3D printing device. The use of a 3D printing device for applying an adhesive to a surface of an adherend or a surface of a transfer adhesive carrier is also proposed, and a method for adhesively bonding two adherends is provided.
