Abstract (en)

[origin: WO2019185328A1] The invention relates to a gas diffusion electrode (2) having at least two layers (4, 6), of which a first layer (4) comprises an electrically conductive fabric (8), which is embedded at least in part in a hydrophobically acting polymer matrix (10), and a second layer (6) has an open porosity (12) which comprises catalytically acting particles (9) and has a thickness between 1 µm and 50 µm.
