Abstract (en)  
[origin: WO2019122038A1] The invention relates to a multi-volume flushing system comprising a closable flushing water supply (7, 8), a user actuator (9) and a flushing process trigger (10) coupled with the user actuator (9) by means of which trigger the flushing line (8) can be opened or closed, wherein the multi-volume flushing system furthermore comprises at least one vibration detector (16) and central processor unit (12) disposed outside the water (3) of a collecting tank (4), wherein the flushing process trigger (10) can be activated on the basis of vibrations detected by the vibration detector (16) and evaluated by the central processor unit (12).
