Abstract (en)
[origin: WO2019118998A1] Column-ceiling node (1) for a reinforced concrete ceiling (11) and two prefabricated concrete columns (2, 3, 4) in storey construction, wherein the upper end (7) of the lower concrete column (3) and/or the lower end (8) of the upper concrete column (4) are or is arranged adjoining the reinforced concrete ceiling (11), wherein the column axes (5) of the concrete columns (3, 4) extend substantially along a common straight line. The column-ceiling node (1) has a cross section in the region of the upper end (7) of the lower concrete column (3) that is greater than a cross section of the central half (6) of the longitudinal extent of the lower concrete column (3), and has a cross section in the region of the lower end (8) of the upper concrete column (4) that is greater than a cross section of the central half (6) of the longitudinal extent of the upper concrete column (4).
