Abstract (en)  
[origin: WO2019120962A1] The present invention relates to a luminaire (100) having a light head (1) for receiving a light source, and a holding element (2), wherein the light head (1) is arranged in a manner mounted on the holding element (2) such that it can be pivoted about a pivot axis (X6) by means of a pivot bearing (6), wherein the pivot bearing (6) has a first connecting part (8) on the holding element (2) and a second connecting part (10) on the light head (1), wherein at least one of the connecting parts (8, 10) has a first latching element (12) which is prestressed in relation to the other connecting part (10, 8) as seen in the direction of the pivot axis (X6) and which interacts with a corresponding second latching element (14) of the other connecting part (10, 8) in such a way as to connect to the light head (1) and the holding element (2) in a detachable manner in a mounting direction (Z2) substantially transverse to the pivot axis (X6) and in a pivotable manner about the pivot axis (X6).
