Abstract (en)  
[origin: WO2019123380A1] The present invention concerns a pallet assembly (10) intended to equip an escapement of a timepiece and comprising a main body (1), an input pallet (3) and an output pallet (4), said pallets (3, 4) being attached separately to the main body (1) such that the position of those pallets relative to that body can be adjusted separately. The input pallet (3) and the output pallet (4) are produced from a first material chosen from the following materials: ceramic, glass, an oxide excluding ruby and sapphire, metal alloy or metallic glass, and polymer. The input pallet (3) and the output pallet (4) are attached in respective housings of the main body by means of a thermoplastic resin (glue).
