Abstract (en)

[origin: WO2019121116A1] The invention relates to a timepiece comprising a drive module (10), a dial (12) comprising a central opening (13), an hours wheel (14) passing through the central opening (13) of the dial (12) and rotationally driven by the drive module (10), and a dial attachment device. The attachment device comprises a retaining tube (15) arranged around the hours wheel (14) and mechanically connected to the drive module (10). The retaining tube (15) is configured to come to bear against the dial (12) or against a dial support (17) to which the dial is fixed.
