Abstract (en)
The invention relates to a home appliance, in particular laundry treatment apparatus, dish washer, dryer or washing machine. The home appliance comprises : an articles treatment chamber (18); a process air channel (20) for guiding process air (A) to or from the articles treatment chamber (18) for treating the articles (19) using the process air (A); and a liquid guiding device (41) having an inlet (52) and an outlet (54). The liquid guiding device (41) is adapted to guide liquid from the inlet (52) to the outlet (54); the outlet (54) is adapted to direct the liquid to a component (10) of the appliance (2) and/or to a predefined location of the appliance (2); the process air channel (20) has a wall opening (82) and the liquid guiding device (41) is forming a closing or wall element such that when the liquid guiding device (41) is inserted in the wall opening (82) the process air channel (20) is closed, sealed or covered at the wall opening (82); the liquid guiding device (41) is formed by and is portion of the process air channel (20); and in the outer end region of the outlet (54) of the liquid guiding device (41), the liquid guiding device (41) is formed as or comprises a deflecting element (66) adapted to deflect the liquid at the outlet (54), or the liquid guiding device (41) is formed as or comprises an expanding element for enabling a liquid flow spatial distribution at the outlet.
