Abstract (en)  
[origin: WO2019129942A1] The invention relates to a tool (100) for removing an annular part (10, 14) mounted around a shaft (8) of a turbomachine (1), having: - a holder (101) intended to cooperate with a lifting system, - means (102) for coupling and holding the annular part (10, 14) said coupling and holding means (102) being secured to the holder (101), the means for coupling and holding (102) having an opening (1021) designed to receive the shaft (8) of the turbomachine (1) during the removal of the annular part (10, 14), the coupling and holding means (102) being rotatable with respect to the holder (101) between a first position and a second position by rotation means for tilting the annular part (10, 14) with respect to the holder (101) when the coupling and holding means (102) are fastened to the annular part (10, 14).
