Abstract (en)
[origin: WO2019129946A1] The invention relates to a method for virtualising a connected object (O3) of a communications network (1, 3). The connected object has at least one main characteristic (CB1_O3...CBN_O3). The method comprises the following steps: obtaining (E20) at least one identifier (ID) and at least one main characteristic (CB1_O3...CBN_O3) of the connected object to be virtualised; obtaining (E22) at least one enrichment characteristic (CE1_O3...CEN_O3); and creating (E21, E23) an avatar (AV_O3) comprising: a first data structure (SDB_O3) comprising the main characteristic (CB1_O3,... CBN_O3) of the connected object; a second data structure (SDE_O3) comprising the enrichment characteristic (CE1_O3,... CEN_O3); instructions of programs (PE1_O3 ... PEN_O3) for implementing the enrichment characteristic (CE1_O3,... CEN_O3); and an address management structure, a so-called proxy (PY_O3), comprising a correspondence at least between an avatar address (@AV_OV3) and a connected object address (@O3).
