Abstract (en)  
The invention relates to a reflective ring or bracelet (10; 20) comprising at least one continuous reflective freeform surface (12; 22) configured to reflect light rays to a projection surface (30). The at least one continuous reflective freeform surface (12; 22) comprises a predetermined 3D pattern for projecting a predetermined image on the projection surface (30). The invention also relates to a method of manufacturing the reflective ring or bracelet (10; 20), comprising: i) providing a black and white image of the image to be displayed on the projecting surface (30), ii) using a computer algorithm to calculate the shape of the predetermined 3D pattern of said at least one continuous reflective freeform surface (12; 22), iii) generating a 3D surface in industry standard CAD format based on the predetermined 3D pattern, iv) providing a blank ring or bracelet, and v) reproducing the 3D surface on the blank ring or bracelet.
