Abstract (en)

The present invention relates to a swing door system (1) for a freezer device, comprising at least two adjacent swing doors (2, 3), each swing door having a transparent region (2a, 3a), wherein at least one of said two adjacent swing doors comprise a sealing (20, 30) and wherein said at least two adjacent swing doors are arranged such that in a closed position said at least one sealing provides an essentially hermetic sealing function between said two adjacent swing doors.
