Abstract (en)
[origin: CN111877892A] The invention relates to a door handle mechanism (2), in particular an outer door handle mechanism, for a door, the door handle mechanism (2) comprising a door handle (3) which can be moved from an embedded position into a use position, and a return spring (4), wherein the return spring (4) is coupled to the door handle (3) and, in the embedded position and in the use position, to at least one counter-bearing (G) which is fixed in this case; wherein the return spring (4) is decoupled from the counter-bearing (G) between the embedded position and the use position. The invention also relates to a movement mechanism (1).
