Abstract (en)
[origin: EP3734179A1] An air conditioning unit (12A) that blows out temperature-controlled air to a front side indoors includes a use-side fan (55), a casing (60), and a second air passage forming member (72). An air passage (FS1) of the second air passage forming member (72) has a circular cross-sectional shape. The casing (60) has a rectangular shape in front view. The rectangular shape is surrounded by a first side (S61) and a second side (S62) that are parallel to each other, and a third side (S63) and a fourth side (S64) that are parallel to each other. In the air conditioning unit (12A), a smaller one of a height dimension (H) corresponding to a distance between the first side (S61) and the second side (S62) and a width dimension (W) corresponding to a distance between the third side (S63) and the fourth side (S64), or the height dimension (H) is equal to or smaller than 2.5 times a diameter (D) of a cross section of the air passage (FS1).
