Abstract (en)
Refrigerator (1) designed for storing food under vacuum, comprising a body (2) and a door (4), with a suction pipe (6) placed in said body (2) and extending in said door (4) to lead to at least one opening (37) formed in the inner panel (4') of the door (4) designed to accommodate a normally closed valve (30), in which a bracket (11) is provided, supporting at least one container (20) with lid (21) that can be opened with a hinge, said bracket (11) being mountable on said inner panel (4') of the door (4) and being provided with at least one hole (15) in alignment with said opening (37) in the panel (4'), in said lid (21) of the container (20) a rod (40) being provided which is placed in axial alignment with said hole (15) of the bracket (11) and said opening (37) of the panel (4') in lowered position of the lid (21) on the respective container (20), said rod (40) being controllable by a frontal knob (50) which causes an axial displacement thereof for the opening/closing of the valve (30).
