Abstract (en)

[origin: US2020264743A1] An application processing method is performed at a computing device, the method including: displaying a first page of a first child application managed by a parent application, the first page of the first child application including a child application jump portal; detecting a child application jump operation corresponding to the first page in response to a user selection of the child application jump portal; presenting, in the first page candidate child application identifiers according to the child application jump operation; determining a child application identifier that is selected from the presented child application identifiers through a user selection operation; and generating, by using a second child application corresponding to the user-selected child application identifier, a second page that is displayed by covering the first page already displayed and that belongs to the second child application.
