Abstract (en)
Embodiments of the present invention provide a method operating on user equipment (UE). The method comprises: initiating a preamble transmission counter (COUNTER) in a random access procedure to count a number of preamble transmissions in the random access procedure; and when the value of the counter (COUNTER) reaches or exceeds a preset maximum number of transmissions, determining, according to a trigger cause of the random access procedure, whether to indicate a random access problem to an upper layer of the UE.
