Abstract (en)
[origin: WO2019134722A1] Described is a centrifuge having a stationary outer casing (1) and a centrifugal drum (2) that is rotatably mounted in the outer casing. The centrifugal drum has chambers which are separated from one another by annular horizontal partitions (4). The partitions (4) are provided with through-holes (31) which are distributed at a peripheral distance from each other over the periphery of the partitions. This results in more advantageous flow conditions inside the centrifugal drum.
