Abstract (en)
[origin: WO2019134810A1] The invention proceeds from a power tool device, in particular for portable power tools, having at least one signal switching unit (12) that has at least one signal switching element (14) that is actuatable at least in order to activate a drive unit (16) of the power tool (18), having at least one operating mode selection unit (20) that has at least one operating mode selection element (22) that is actuatable in order to select an operating mode of the drive unit (16), and having at least one locking unit (24) that has at least one locking actuating element (26) at least for locking the signal switching element (14). It is proposed that the power tool device (10) comprise at least one electronic unit (28) that is provided for controlling and/or regulating the drive unit (16) at least depending on an evaluation of a setting parameter of the locking actuating element (26).
