Abstract (en)
[origin: WO2019162212A1] The present invention relates to a printing process for transferring a printing substance from an ink carrier onto a print material, according to which the printing substance undergoes a change in volume and/or position due to the effect of an energy-emitting device which emits energy in the form of electromagnetic waves during a process time, the printing substance comprising a high-molecular binder. The present invention furthermore relates to a printing substance for carrying out the process and to the use thereof.
