Abstract (en)

[origin: WO2019093974A1] The wheel or the rotational corporeal body with the correction of precession effects in means of transport, work machinery or any other technical devices deal with the correction of adverse force effects on wheels (2) or on rotational bodies (2) with the aid of the corrective mechanism (1) of precession influence forces. The corrective mechanism (1) of precession influence forces includes the corrective wheel (12) or the corrective rotational bodies (12), which have in relation with the wheel (2) or the rotational body (2) contrarily oriented revolutions. The corrective wheel (12) or the corrective rotational body (12) is connected via their shafts with the rotor of the electric motor (13). The stator (14) of the electric motor (13) is mounted rotatably to the shaft (4).
