Abstract (en)
[origin: WO2019134890A1] A web guiding device (1) is shown and described for changing the lateral position of a material web (2) during the treating or processing of material webs (2), preferably during the treating or processing of a paper web, paperboard web, plastic web, composite material web or fabric web, having at least one pivotably arranged web guiding roller (3, 17, 18), wherein the material web (2) at least partially wraps around the web guiding roller (3, 17, 18) as the material is transported, and wherein the lateral position of the material web (2) is changed by the pivoting of the web guiding roller (3, 17, 18). According to the invention, at least one breaker tool (12, 22) is provided in the run of the web-shaped material (2) between the pivotable web guiding roller (3, 17, 18) and another web guiding roller (3, 17, 18).
