Abstract (en)
[origin: WO2019135025A1] An adjustment part (2; 22) for adjusting, in conjunction with installation and fastening, the vertical straightness or position of railing type assemblies, such as glass railings (1), extending in vertical direction and being fastenable by a bottom edge region, said adjustment part being placed at a fastening point of the railing assembly between the railing assembly and a mounting surface (3) there for, said adjustment part (2; 22) comprising two mutually inclinable components (7, 8; 27,28), a space (9; 29) established between these components for locking a relative position of said mutually inclinable components with a hardening mass, as well as a conduit (10; 30) extending from an external surface of the adjustment part into said space for supplying said space with the hardening mass.
