Abstract (en)

[origin: WO2019154564A1] The invention relates to a professionally customisable timepiece, having at least one primary casing and at most one secondary casing. At least one primary casing is enclosed completely by the secondary casing. When mounted, the window of the secondary casing can be rotated as desired about the centre axis without a primary casing moving. A primary casing occupies less than 50%, preferably less than 30%, of the volume enclosed by the secondary casing. The watch wearer is thus provided with a large accommodation space inside the secondary casing for customisation. Tools or specialist watchmaking skills are not necessary for customisation.
