Abstract (en)

[origin: KR20190095076A] The present disclosure relates to a 5<sup>th</sup> generation (5G) or pre-5G communication system to support a higher data transmission rate than that of a 4<sup>th</sup> generation (4G) communication system such as long term evolution (LTE). An operation method of a terminal in a wireless communication system comprises the processes of: detecting a state related to antennas provided in the terminal; activating a first antenna according to the state related to the antennas; and deactivating a second antenna according to the state related to the antennas.
