Abstract (en)  
[origin: CN111904332A] The invention relates to a suction device (100) comprising a housing (102) having an air inlet (152) through which an air flow (150) can enter the housing (102), an electric motor (142) for generating the air flow (150), at least one cyclone chamber (120), a collection container (104), and a filter element (106), and comprising an air outlet (154) through which the air flow (150) can enter, the air flow (150) can exit the housing (102) via the air outlet. According to the invention, the suction device (100) has at least one air guide device (200) for guiding the air flow (150) in the cyclone chamber (120).
