Abstract (en)

A connector having improved high-frequency transmission characteristics is provided. A high frequency connector (9) includes an insulator (10), and a plurality of contact terminals (20) arranged in a predetermined direction in the insulator (10). The plurality of contact terminals (20) include a plurality of ground terminals (20G) and a plurality of signal terminals (20S). Each of the ground terminals (20G) and the signal terminals (20S) includes an arm portion (20A) supported in a cantilever manner by the insulator (10). The arm portion (20A) includes a contact portion (22) and an inclined guide portion (23) extending from the contact portion (22) to a distal end of the arm portion (20A). The length of the inclined guide portion (23) of the signal terminal (20S) is shorter than the length of the inclined guide portion (23) of the ground terminal (20G).
