Abstract (en)

[origin: WO2019170333A1] The invention relates to a vehicle bridge body (4) for a multiple-unit rail vehicle (2), which vehicle bridge body has no bogie and has a first support point (11) at the first end (10) of the vehicle bridge body and a second support point (11) at the second end (12) of the vehicle bridge body for support on respective rail cars (6, 8) of the multiple-unit rail vehicle (2). The aim of the invention is to provide a more flexible vehicle bridge body (4). This aim is achieved, according to the invention, in that the vehicle bridge body (4) has a first passable entrance region (14) and a second passable entrance region (16), the two entrance regions (14, 16) being arranged at different heights with respect to the vehicle bridge body (4).
