Abstract (en)  
[origin: WO2019137898A1] The invention relates to a furniture hinge comprising a body-side main element (10) and a hinge cup (20) which is pivotally guided relative to the base element and which can be secured to a movable furniture part. The main element (10) and the hinge cup (20) are connected together via a lever mechanism. The furniture hinge is characterized in that the lever mechanism has at least two levers (40), each of which is mounted on the hinge cup (20) in a pivotal manner about a pivot axis that is aligned perpendicularly to the pivot axis of the hinge cup (20) and each of which is provided with a toothing that meshes with another toothing (51) arranged in the hinge cup (20). The invention additionally relates to a furniture panel (80) and a furniture body comprising such a furniture hinge.
