Abstract (en)
[origin: WO2019137651A1] The invention relates to a device (10) for monitoring an object, wherein the device comprises an electronics unit (20) for detecting and storing at least one environmental parameter acting on the object. According to the invention, the device (10) has a support element (30) which is adhesive on an upper side (31) and on a lower side (32), wherein the electronics unit (20) is arranged on the upper side (31) of the support element (30) and is adhesively connected to the upper side (31) of the support element (30), and wherein the device (10) can be adhesively applied to the object by means of the lower side (32) of the support element (30).
