Abstract (en)

[origin: WO2019137655A1] The invention relates to a radar system for a vehicle, comprising at least one central control unit for transmitting data and for processing received data, and at least one radar sensor head which is at a distance from the at least one central control unit and comprises at least one transmitting antenna for producing radar waves and at least one receiving antenna for receiving radar waves, as well as at least one data line between the at least one central control unit and the at least one radar sensor head, the at least one radar sensor head comprising an analysis unit installed downstream of an analog-digital converter and upstream of the at least one data line, for at least partially processing digital measuring data produced by the analog-digital converter (16).
