Abstract (en)
[origin: WO2019138179A1] The invention relates to a method for updating a database for returning a vehicle (CAR) which includes the following steps: - generating (GEN_IDDISPO) an availability indicator (IDDISPO); - transmitting (TRANS1_M1) the availability indicator (IDDISPO) to at least one user device (EQ1) belonging to a first user (U1) via a short-range wireless link (LCP1); - saving (ENR_M1) all the information (M1) in a memory of the device (EQ1) until subsequently detecting access to a data network (NET); - automatically transmitting (TRANS2_M1) all the information (M1) including said availability indicator (IDDISPO) to a remote server (SERV); and - updating (MODIF_DISPO_CAR) a database (BD) modifying a vehicle (CAR) availability status within a fleet of vehicles (∑CAR) by a computer (K2) of the remote server (SERV).
