Abstract (en)

[origin: EP3738474A1] A device (1) for adjusting a degree of inclination of the seat of a chair, which has a box-like element (2), which can be associated mechanically below an axially perforated plate (10), which in turn can be associated below the seat. The box-like element (2) is adapted to contain a pair of flat dampers (18a, 18b) between which adjustment means (20) are interposed for adjusting the stroke limit of the inclination of the seat with respect to the plate (10) along two distinct diametrical planes. The adjustment means (20) comprise a receptacle for a gas-operated post (15) of the seat.
