Abstract (en)  
[origin: EP3738489A1] A shower door comprises a fixed component, a movable door (100), a closer (400), a clamping seat (102) and a fixed seat (206), the fixed component being fixedly mounted in a shower room, the movable door (100) being rotatable around a rotational shaft (101), and the closer (400) comprising a main body (401) and a sliding body (402) which penetrates through a first end of the main body and is extendable and retractable along a longitudinal direction of the main body; a second end of the main body (401) is fixedly connected with the movable door (100) through the clamping piece (102), an outer end of the sliding body (402) being hinged with the fixed seat (206), and the fixed seat (206) being fixedly connected with the fixed component; the distance from the position where the outer end of the sliding body (402) is hinged to the fixed seat (206) to the rotational shaft is smaller than the distance from the clamping seat (102) to the rotational shaft (101). The closing force of the closer (400) required when the movable door (100) of the shower door is closed is greatly reduced, so that the size of the closer (400) can be reduced.
