Abstract (en)

[origin: EP3738715A1] A device (1) for supporting spring-damper assemblies for machines (100) for assembling/disassembling vehicle suspensions, of the type comprising a frame (101) for supporting presser means (102) for the compression/release of the spring of a spring-damper assembly, a connecting element (2) which can be associated with the frame (101) of the machine (100) and means (3) for supporting a pair of jaws (4) which can move in an alternating manner mutually closer/apart and are adapted to form a resting surface (S) of the lower turn of a spring of a spring-damper assembly being processed. Furthermore, the supporting means (3) of the jaws (4) are associated with the connecting element (2) so as to be orientable around a substantially horizontal rotation axis (A).
