Abstract (en)

[origin: CN111945380A] The present invention relates to a laundry care appliance having: a lye container; a laundry drum; a washing liquid supply device; a pump which is used for pumping the washing liquid into the liquid pipeline through the discharge opening and supplying the washing liquid to the alkali liquor container through the input opening; a volume detection device; a control device which activates the washing liquid supply device during a first time period, supplies a first washing liquid amount to the alkali liquor container, activates the pump to circularly pump the washing liquid through the liquid pipeline during the first time period, and the volume detection device detects a first volume of the uncombined washing liquid; a control device which activates the washing liquid supply device and supplies another amount of washing liquid to the alkali liquor container during another time period, activates the pump to circularly pump the washing liquid through the liquid pipeline during another timeperiod, and the volume detection device detects another volume of uncombined washing liquid. The control device deactivates the washing liquid supply device after another time period when the sum of the first volume and the other volume exceeds a body positive limit.
