Abstract (en)  
[origin: CN111945379A] The present invention relates to a laundry care appliance having: an alkali liquor container comprising a discharge opening and an input opening connected by a liquid line; a laundry drum; a washing liquid supply device; a pump configured to pump a washing liquid into the liquid line through the discharge opening and supply the pumped washing liquid to the alkali liquor container through the input opening; a volume detection means for detecting the volume of the washing liquid that is not bound to the laundry; and a control device which determines the amount of washing liquid supplied to the alkali liquor container based on the textile type and/or the weight, activates the washing liquid supply device during a period of time, supplies the determined amount of washing liquid to the alkali liquor container, activates the pump during the period of time so as to circularly pump the supplied washing liquid through the liquid pipeline. When the detected volume exceeds the volume reference value, the washing liquid supply device is stopped, and the volume reference value is determined according to the type and/or the weight of the textile.
