Abstract (en)

[origin: EP3739252A1] A holding device (1) to hold a tube or cable (2) in engagement with a bracket (3) is provided with a structure (10) having a seat (14), which is a through seat along an axis (15) and is defined by a substantially C-shaped edge so as to have a radial opening (16); the structure (10) further has a slit (21), which extends along a radial direction (22) up to said seat (14) so as to allow the bracket (3), in use, to be inserted into the slit (21) and engage the seat (14); the holding device is further provided with a wing (35), which is movable between an open position, in which the seat (14) can be accessed through the opening (16) and a closed configuration, in which the opening (16) is closed by the wing (35).
