Abstract (en)

[origin: EP3739866A1] Provided is an information processing apparatus capable of further enhancing an effect of reducing blurring or noise in an image at the time of MFNR. An information processing apparatus including a control unit that selects a reference image from a plurality of images continuously captured by an image capturing apparatus, on the basis of information of the image capturing apparatus acquired by an inertial sensor when each of the images is captured, and superimposes remaining images on the reference image while performing alignment with the reference image, to combine the images into one image.
