Abstract (en)
[origin: WO2019141603A1] The invention relates to specific chromium tanning agents, and to the use thereof for tanning skins and furs, and the leathers and pelts obtainable thereby. The invention further relates to a novel method in which the protein-masked chromium tanning agents according to the invention are obtained from chromium- and collagen-containing materials, in particular waste from leather production such as, for example, leather shavings. This permits recycling of chromium-containing wastes from leather production, by means of which the quantity of such waste can be reduced significantly, which leads to considerable economic, ecological and logistical advantages.
