Abstract (en)
[origin: WO2019138124A1] A device (22) for securing a railway apparatus, comprising a support platform (24) and a mechanism (30) for securing the apparatus on the platform (24), the securing mechanism (30) comprising: - at least one guiding slide (32) extending in a longitudinal direction, supported by the support platform (24); and - a member (34) for attaching the apparatus to the platform (24) capable of moving along the guiding slide (32). The securing mechanism (30) also comprises an upper beam (27) supporting the guiding slide (32) and a lower beam (26), connected by means of a connecting member (31) so as to be movable in a direction perpendicular to the longitudinal direction of the guiding slide (32). Moreover, the securing mechanism (30) comprises locking means (52) configured to prevent the movement of the upper beam (27) with respect to the lower beam (26) in said perpendicular direction.
