Abstract (en)

[origin: WO2019141313A1] The invention relates to a control system, a use of said control system, and a control method for controlling a plurality of electrical power units (A1, A2, ..., An) connected to the Internet (1) in a power unit cluster, in particular for providing control power in a transmission network. The control system has a communication computer (2) comprising an Internet connection (21), an input connection (23), and a communication module (22). The communication module (22) is configured to form packet-switched communication connections between the communication computer (2) and each of the electrical power units (A1, A2, ..., An) via the Internet connection (21) and, via the input connection (23), to send measurement data and/or status data of the power unit cluster and/or to receive control data for controlling the power unit cluster.
