Abstract (en)

[origin: WO2019166329A1] The invention relates to an operating device for lamps, comprising: connections for supplying at least one lamp with power; a bus interface for connecting a wired bus, in particular a DALI bus, wherein the bus interface has a bus controller; a wireless interface, in particular a bluetooth interface, wherein the wireless interface has a controller; and a non-volatile memory to which both the bus controller and the controller of the wireless interface have access.
