Abstract (en)
[origin: CN113174693A] The invention relates to a ball stud assembly, especially in a pattern arrangement of a warp knitting machine, with a first end (2) which has at least spherical part, a second end (3) and a section (4) between the first end (2) and the second end (2), wherein at least part of the ball stud has a cavity (9) which is fluidically connected to an outer surface (7) by at least one channel (5). It is desired to reduce the adjustment effort of the warp knitting machine and the maintenance effort of the ball stud (1). For this purpose, an element (8), which consists of thermally conductive material, surrounds the section (4).
